

A Word About “STREAM”

STREAM (Science, Technology, Religion, Engineering, Art, and Mathematics) is an innovative class that allows students to explore learning through inquiry, creativity, and problem-solving.

With technology constantly evolving, STREAM prepares students for the future by moving beyond simply “getting” an answer to instead investigating how and why answers are reached.

Through cross-curricular, hands-on activities, students will develop and strengthen essential 21st-century skills such as collaboration, communication, critical thinking, and creativity. By integrating science and engineering with artistic expression, mathematical reasoning, technology use, and faith-based perspectives, STREAM helps students make meaningful connections across disciplines and discover practical applications of what they are learning in school.

Grading for this course will be PASS (S) or FAIL (I or U). An I or U in any class will keep a student off the Honor Roll in the Junior High grades.

STREAM empowers students to think like innovators, problem-solvers, and creators as they move full “STREAM” ahead into the future!
